The emphasis in degradable polymers has changed since the first edition of this book. Biomedical and agricultural applications remain important topics of scientific and commercial interest in the second edition. However, an increased emphasis on composting as a means of recovering value from wastes

Biodegradable polymers and plastics Andrej KrÅ¼an. 2 Biodegradation Biodegradation or biotic degradation is a specific property of certain plastic materials - that is, of the polymers these materials are made of. It is a process by which a polymer material decomposes under the influence of biotic components (living organisms). Microorganisms (bacteria, fungi, algae) recognize polymers as a ...

At the opposite end of the commercial spectrum, the polymer manufacturÂ-ing industries, through their trade associations, have been at pains to discount the role of degradable materials in waste and litter management. This negative campaign has concentrated on the supposed incompatibility of degradable plastics with aspects of waste management strategy, notably materials recycling.

Not too long ago, the world economy was mainly based on agricultural products and its trades and barter between various communities and countries. With the discovery of crude oil, petroleum based fuels, chemicals, polymers and all of their downstream products took a foothold and the world economy was changed forever.
